

TELEINVEST International Ltd. unveils a new module on its trading platform PREDATOR – The Fatal Weapon: Global Market Depth for Single Order Book.

Featuring multi market views and depths, it covers more than 200 exchanges worldwide in real-time. Traders can check all market prices for their order book and the best quotes for a single security from the different market places, at a glance.

Different views of market depth are available, in aggregated or detailed view and showing the trader in addition where he/she stands in the market with his/her own quotes. Thus, an instantaneous picture of the market helps to make the right decision and comply with best execution requirements. In addition, applying appropriate tools like smart order routing or algorithmic strategies, to cope with ever more fragmented liquidity, can take into account the information about market depth.

“Predator shows again its capacity to adapt smoothly to changing trading environments. Teleinvest is happy to register a constant flow of orders for this module, from existing and prospective clients” remarked Joseph Kuettel, director sales & marketing international at the company’s Liechtenstein offices.
